

Investigating the amount of solar radiation that would power Earth and the possibility of detecting extraterrestrial solar panels from a distance of light years

The scientists conducted a study of five million distant solar systems using "neural network" techniques, and their findings were interesting when they discovered over 60 stars ...

These purposes include: Security, moderation, anti-cheat, and anti-fraud activities. We may share some of the information we collect to help operate, improve, and support the Games and ...

Solar power technology improves continuously. Efficiency increases and costs decrease, making space-based solar power stations more plausible. The Japanese JAXA space agency and ...

Purpose of the Study This study evaluates the potential benefits, challenges, and options for NASA to engage with growing global interest in space-based solar power (SBSP). Utilizing SBSP entails in ...

Scientists carried out a survey of five million distant solar systems with the help of "neural network" algorithms and it took an interesting turn when they found nearly 60 stars surrounded by ...

Scientists carried out a survey of five million distant solar systems ...

Researchers have shown that highly advanced alien civilizations could theoretically build megastructures called Dyson spheres around black holes to harness their energy, which can be ...

According to new research by Professor Alex Ellery of Carleton University, these probes may have already visited the Solar System, and some could be operating here right now.

Why planetary scientists think advanced aliens will turn to nuclear fusion to meet their massive energy needs. Here's how we might spot them.

NASA researched if future space telescopes could detect the use of widespread solar panels by alien civilizations in our galaxy.
