

# Application scenarios of household energy storage power supply

What is Scenario 4 of a household PV system?

Scenario 4 is that the household PV system is configured with energy storage. The operation mode is that the PV is self-generation and self-consumption, and the surplus PV power is connected to the grid.

What is the SOC of energy storage system in power system?

Refer to the "General Technical Requirements for Electrochemical Energy Storage System in Power System" (GB/T 36558-2018), the SOC of energy storage is 0.2-0.95, and the charging and discharging efficiency is 90 %

How can Household PV energy storage system improve energy utilization rate?

In addition, in order to further improve the energy utilization rate and economic benefits of household PV energy storage system, practical and feasible targeted suggestions are put forward, which provides a reference for expanding the application channels of distributed household PV and accelerating the development of distributed energy.

What is the impact of capacity configuration of energy storage system?

The capacity configuration of energy storage system has an important impact on the economy and security of PV system. Excessive capacity of energy storage system will lead to high investment, operation and maintenance costs, while too small capacity will not fully mitigate the impact of PV system on distribution network.
