

# Are the New Year atmosphere lights powered by solar energy

As a giant ball of hot plasma, the Sun experiences periodic eruptions of immense energy, known as solar flares. These flares release a torrent of charged particles that are propelled outward...

Auroras are vibrant light displays created when energetic particles from the Sun interact with Earth's magnetic field and atmosphere. These events, also seen on other planets like Saturn ...

Aurora displays known as the northern and southern lights are commonly visible near the poles, where charged particles from the sun interact with Earth's atmosphere.

But first, let's look back at the incredible New Year's Eve display, with these spectacular northern lights photos.

A breathtaking auroral display ushered on the New Year, illuminating skies across parts of the central United States and Europe. Triggered by a pair of powerful solar storms, the northern ...

NOAA's Space Weather Prediction Center is tracking powerful geomagnetic solar storm activity that is impacting Earth's magnetic field and unleashing northern lights. A powerful ...

He's a solar physicist who studies the sun's volatile nature--dynamics that can, under certain circumstances, create brilliant light shows in Earth's atmosphere. These phenomena are ...

The solar system is putting on its own New Year's Eve show, with the northern lights potentially visible as far south as Oregon and Illinois on Dec. 31.

After a bevy of solar activity, the Earth will begin the new year with geomagnetic storms and possible displays of Aurora lights as far south as the Midwest.

The warning was triggered by a coronal mass ejection (CME), charged particles from the Sun reaching Earth's atmosphere overnight on Monday. CMEs usually take about three days to ...
