

Increased supply of lithium is paramount for the energy transition, as the future of transportation and energy storage relies on lithium-ion batteries. Lithium demand has tripled since ...

Generators added 10.4 GW of new battery storage capacity in 2024, the second-largest generating capacity addition after solar. Even though battery storage capacity is growing fast, in 2024 it was ...

Over the past three years, battery storage capacity on the nation's grids has grown tenfold, to 16,000 megawatts. This year, it is expected to nearly double again, with the biggest growth ...

The European Energy Storage Association calls for a significant increase in energy storage deployment in the European Union, requiring an additional 500-780 GWh of battery energy storage ...

Executive summary Batteries are an essential part of the global energy system today and the fastest growing energy technology on the market Battery storage in the power sector was the fastest ...

Big news in the world of car batteries: Researchers have discovered how to increase battery storage tenfold -- perfect timing for the increasingly booming electric vehicle (EV) industry.

MIT researchers have improved a new type of "concrete battery" by tenfold, paving the way for its use in turning buildings, bridges and sidewalks into giant energy stores capable of ...

This trend partly explains the growing demand for distributed energy storage systems, for example, the increasing adoption of household battery units paired with rooftop solar panels. For grid-scale ...

The International Energy Agency (IEA) predicts that installed battery capacity worldwide will increase tenfold to sixteenfold by 2030. ING predicts that 48GW of battery storage will be ...

Management projected a tenfold increase in the energy storage and management business over the next three years, underpinned by new products and expanded production capacity.
