

Infrastructure Canberra (iCBR) builds infrastructure across the ACT to meet the needs of our growing city. Infrastructure connects and transforms the way we move through Canberra.

This proposal would allow participating consumers to contract demand response services to a third party. The Australian Energy Council (AEC), which represents all the major generators and retailers, ...

What is demand response? Demand response (DR) is the voluntary reduction or shift of electricity use by customers, which can help to keep a power grid stable by balancing its supply and demand of ...

During periods of electricity system stress, EnergyAustralia may call upon qualifying customers to activate their demand response plan, to help relieve pressure in the electricity grid. In turn, we ...

Demand response enables retailers and large businesses to work together to alleviate stress on the grid during critical times, increasing system reliability and helping to reduce price...

The WDRP Guidelines will set out information that Demand Response Service Providers (DRSPs) must retain in relation to their compliance with National Electricity Rules (NER) obligations under the Final ...

This paper evaluates Integrated-Demand Responsive Transport (I-DRT) as a solution to the challenges faced by traditional public transport (PT) systems in low-demand urban areas. The ...

Demand Responsive Transport (DRT) is a flexible mode of transportation that enables passengers to request rides based on their specific needs, rather than relying on a fixed timetable.

Discover how Demand Response (DR) programs are crucial for grid stability in Australia, balancing renewables, lowering costs, and preventing blackouts.

Transit Route Optimization Was Evaluated in Canberra, Australia. Traditional public transport (PT) systems often face limitations in low-demand urban areas due to their inherent ...
