

Today, Sol Systems, a leading renewable energy company, announced a clean energy project for which Columbia University will act as anchor tenant.

Technological advancements are dramatically improving solar storage container performance while reducing costs. Next-generation thermal management systems maintain optimal operating temperatures with 40% ...

From cutting energy bills to ensuring uninterrupted power, Columbia's home energy storage systems aren't just products--they're partnerships in building resilient, sustainable homes.

Sol Systems, a renewable energy leader, has announced a sustainable initiative in collaboration with Columbia University, positioning the university as the anchor tenant for a community solar carport and ...

Columbia University has pledged its support for a new solar energy and battery storage project in Croton-on-Hudson. Leading renewable energy company Sol Systems will serve as the project developer, ...

"This project showcases the immense potential of renewable energy and battery storage in providing clean and sustainable solutions for communities."

The Croton-Harmon community solar carport and battery storage project, a 4 MW solar system paired with 3.75 MW battery storage, is expected to come online this year at the village's Metro-North train ...

Modular photovoltaic (PV) containers tackle grid reliability and energy accessibility challenges in off-grid or remote areas by combining standardized solar generation, energy storage, and ...

Columbia University will be the anchor tenant for Sol Systems' new solar and battery storage project in the Village of Croton-on-Hudson, with plans to purchase solar credits for utility cost savings and to ...

Columbia will act as anchor tenant for the new project, which will harness the power of both solar energy and battery storage to reduce emissions and promote a cleaner environment.
