

What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

Why should you buy a solar generator?

While a generator with solar panels can be useful for anyone who travels and stays in remote off-grid places, it can also serve as a reliable backup energy source in case of a natural or man-made disaster. If the primary purpose is travel, look for solar generators that help make traveling simpler.

Can a solar generator power a house?

If you're looking to power your entire house on a backup generator system, solar may not be the way to go. You can easily recharge small electronics and operate certain appliances with a solar generator but don't expect to be able to keep your fridge, TV, and lighting systems all operational for very long.

How to choose a solar generator?

You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries. The pros of solar generators include free renewable energy, low maintenance costs, and clean and quiet operation, whereas the cons include limited power supply, high upfront price, and slow charge time.
