

What are the charges on my electricity bill?

Your electricity bill is usually made up of two major charges: Energy Charges: This is what most people expect, it's the total amount of electricity you use over the billing period, measured in kilowatt-hours (kWh). Think of this as the "mileage" on your electric meter: how much energy you used, regardless of when or how quickly you used it.

How are electricity bills calculated?

Electricity bills are calculated based on the units you consume, your tariff slab, and extra charges like fixed fees and taxes. Higher usage, inefficient appliances, long operating hours, climate conditions, and poor wiring can all increase your bill. Understanding these charges makes it easier to track and manage electricity costs.

What costs are included in my electricity and gas bill?

There are different costs that are included in your electricity and gas bill. They are: The unit price rate is the rate charged per unit of electricity or gas you use. It is measured in kilowatt hours (kWh). The standing charge is a cost that is included in each electricity and gas bill. It is a cost set by your supplier.

What fees do I need to understand on my electric bill?

Capacity Cost: Another important fee to understand on your electric bill is capacity cost. This fee, usually incurred by commercial customers, ensures that the electric utility has enough capacity available to cover the total power use demand of their customers.
