

Finland's solar grid-connected power generation system

How will a hybrid energy system work in Finland?

In Finland, a number of hybrid projects are in the pipeline, combining wind, solar and also energy storage. These solutions will balance our energy system. On a global scale, solar power is one of the fastest growing forms of energy generation - its size and importance in the world's energy mix is huge, larger than wind power.

What is the future of energy in Finland?

The energy transition is increasing the need for renewable forms of energy, as fossil fuels need to be replaced cost-effectively. The spotlight is now on wind and solar power, which still have plenty of growth potential. Wind power currently accounts for 20 per cent of Finland's electricity consumption, while solar power makes up just one per cent.

How much solar power does Finland have?

According to the preliminary data of the Energy Authority, at the end of 2023, Finland had approximately 1,000 MW of installed solar power production capacity, 936 MW of which was micro-generation and 50 MW from industrial-scale power plants. Unconnected capacity totalled approximately 23 MW.

Will wind power produce half of Finland's Electricity by 2030?

However, by 2030, the goal is for wind power to produce half of Finland's electricity, with solar power contributing 5-10 per cent. Power plants, transmission lines, substations and connections are now being built at a brisk pace. Over the next ten years, Fingrid will invest up to EUR 4 billion in the main grid.

However, by 2030, the goal is for wind power to produce half of Finland's electricity, with solar power contributing 5-10 per cent. Power plants, transmission lines, substations and ...

Välkommen till Finland. På finska Suomi. Här diskuterar vi forskning i Finland. Det kan gälla särskilda forskningsproblem som mer allmänna frågor. Det man idag menar med ...
