Why did the US invest \$50 million in sodium-ion battery technology?

The U.S. DOE announced \$50 million investment over five years to improve sodium-ion battery technology, indicating government recognition of strategic importance while highlighting the early-stage nature of technology development requiring continued research investment rather than immediate commercial deployment.

Will sodium-ion batteries be a disruptive alternative to lithium-ion technology?

A report from the International Renewable Energy Agency (IRENA) notes that while it is still uncertain whether sodium-ion batteries will become a disruptive alternative to lithium-ion technology, they could offer significant cost-saving opportunities in applications such as electric vehicles and large-scale energy storage.

How much does a sodium ion battery cost?

CATL's announced sodium-ion battery pricing of \$19 per kilowatt hour represents a 65% reduction from current lithium iron phosphate costs of \$55-\$70/kWh, not the 90% cost decline claimed across social media channels promoting the technology.

Could sodium ion batteries be a cost-reduction alternative to lithium-ion batteries?

Sodium-ion batteries (SIBs) could offer a promising cost-reduction alternative to lithium-ion batteries (LIBs), according to a report from the International Renewable Energy Agency (IRENA).
