How do I connect solar panels in series?

Connect solar panels in series by following the steps in our "wiring solar panels in series" section. Connect solar panel strings in parallel by using a connector known as MC4 T-Branch Connector 1 to 2, following steps similar to those in our "wiring solar panels in parallel" section.

How to wire a solar panel?

Wiring solar panels is the first step, you have to choose between series and parallel depending on your voltage and current needs. A solar panel array (or photovoltaic array) is necessary when a single panel is not enough, allowing you to combine their power.

How do I connect solar panels to my home's wiring?

Before connecting solar panels to your home's wiring, install them securely on the roof. A single panel won't provide enough energy for your home, so several panels need to be installed and linked together in the right solar panel configuration. This typically involves connecting solar panels in series or parallel, depending on your system design.

How do solar panels connect in parallel?

This connection wires solar panels in series by connecting positive to negative terminals to increase voltage and connects these strings in parallel. All solar panel strings connected in parallel have to feature the same voltage, and they also have to comply with the NEC 690.7, NEC 690.8 (A) (1), and NEC 690.8 (A) (2).
