

The energy storage field links traditional energy with sub-modules such as wind energy, photovoltaics, and lithium batteries. Jinrong Tianyu's layout in energy storage will greatly enhance product competitiveness.

The energy storage system of this product uses a lithium iron phosphate battery cell system and is equipped with multiple electrical protections.

Thanks to the rapid development of photovoltaic (PV) and the popularization of energy storage, PV energy storage systems have become an important part of modern energy systems due to their clean, efficient and ...

The development of zero carbon friends circle Jinrong Tianyu carbon reduction reduction of more than 20% Jinrong Tianyu shares its green experience through the "Zero Carbon Plan". Today, Jinrong Tianyu ...

This year the company began to expand into the field of energy storage, such as providing lithium battery PACK and battery management systems (BMS) for home and industrial and commercial energy ...

The integrated microgrid design concept is adopted for household energy storage, which can operate in both off grid and grid connected modes, and achieve seamless switching of operation modes, greatly improving ...

The world's first intelligent grid-forming photovoltaic and energy storage power station, tailored for ultra-high altitudes, low-temperatures and weak-grid scenarios, has been connected to the grid in Ngari ...

A high-tech enterprise focused on the entire industry chain technology research and development, production manufacturing, and Product Sales of precision metal components and energy storage products.

The rapid growth of the user-side energy storage market has provided ample market space and development opportunities for Jinrong Tianyu and other industrial chain companies.
