

To tackle this issue, this paper proposes a synergetic planning framework for renewable energy generation (REG) and 5G BS allocation to support decarbonizing development of future PDS.

We present the green telecommunication network planning problem with switchable base stations, where the location and configuration of the base stations are optimized, while taking into ...

Various green communication approaches such as BS hardware improvement, sleep mode technique, radio transmission, deployment and network planning (UAV-based) and energy harvesting have ...

In this paper we assess the benefits of adopting renewable energy resources to make telecommunications network greener and cost-efficient, tackling "3E" combination-energy security,...

The present work falls into this framework, more specifically, our goal is to devise the power allocation schemes for base stations in green wireless networks with the focus on downlink.

Cellular base stations powered by renewable energy sources such as solar power have emerged as one of the promising solutions to these issues. This article presents an overview of the state-of-the-art in ...

Where to install base stations How to configure base stations (antenna type, height, sectors orientation, tilt, maximum power, device capacity, etc.) ? ?

1. Introduction, the enhancement of wireless network performance is concerned with meeting the increasing communication demands. For wireless communication systems, the selection ...

Abstract: Green network aims to promote the sustainable development of communication systems, and base station (BS) and cells sleeping has been proven effective in reducing the power consumption of ...

In this paper we assess the benefits of adopting renewable energy resources to make telecommunications network greener and cost-efficient, ...

stations are involving an infinite loop to switch their associated base stations. In this paper, we study an optimi. ation problem for energy-efficient base station operation in 4G cellular networks. The ...
