

The implementation of double-layer coating technology is crucial for advancing lithium-ion battery efficiency. By leveraging intricate multi-layer structures, this approach offers superior battery ...

In recent years, the construction of a protective layer to stabilize the interfacial behavior of lithium metal has attracted much attention, providing an opportunity to realize safe and stable ...

This study not only elucidates the key role of polymers in regulating the IHP but also provides new design strategies for achieving interfacial stability in high-voltage quasi-solid-state ...

The Lithium Battery Double Layer Extrusion Coating Machine is a specialized manufacturing device designed to apply two distinct coating layers onto lithium battery electrodes or...

Download Citation | On Feb 4, 2026, Jinpeng Guo and others published Dual-Layer Composite Polymer Electrolyte Enabling Stable Lithium- Ion Transport in Quasi-Solid-State Batteries ...

Here, the authors created a new strategy by engineering a passivating electric double layer to achieve a fast-charging and lowtemperature high voltage lithium metal batteries.

This study proposes a practical method to increase silicon content in lithium-ion batteries with minimal changes to the manufacturing process by using dual-layer electrodes (DLEs). These ...

Lithium-ion double-layer coating technology is a technology different from the conventional single-layer coating process. It optimizes electrode performance by coating slurries with ...
