

The Performing Arts Center Construction Project, with an investment of 660 million yuan. Located in Gula New District, adjacent to the Tourist Center and Alu Village (a national-level traditional village), ...

Located across different regions of Japan, including Tokyo and Tohoku, the projects have a combined capacity of 48 MW, sufficient to produce nearly 60 GWh of zero-carbon electricity per year, ...

OverviewHistoryGeographyLegendFlora and faunaMosuo peopleEthnic beliefs about the lakeGalleryLugu Lake is a natural lake in the Hengduan Mountain System, and has a horseshoe shape. It is bounded within geographic coordinates of 27°40'59"N 100°45'00"E / 27.683°N 100.75°E and 27°45'00"N 100°49'59"E / 27.75°N 100.833°E . It is located in a high plateau amidst the Xiaoliangshan hills of Western Yunnan. The Lion Mountain that surrounds the lake, which is worshipped as the goddess Gammo, is th...

Welcome to our dedicated page for Lugu Lake Solar Power Generation Project! Here, we have carefully selected a range of videos and relevant information about Lugu Lake Solar Power Generation ...

The relevant results can provide theoretical support for optimizing the land use pattern in plateau lake watersheds, enhancing the adaptive capacity of lake ecological functions to climate ...

Lugu DC is the first UHV DC channel of the Northeast Power Grid, with Jixi Baicheng outward transmission capacity of 1.4GW. The support power supply construction will include 800MW wind ...

On April 3, Jilin Electric Power Co., Ltd. made an inquiry on the preliminary design of its Jixi Base Lugu 1.4 million kW DC Transmission Project 1 (solar thermal 100MW) of Tongyuzhongji...

Lugu Lake straddles between Ninglang County in Yunnan Province and Yanyuan County in Sichuan Province, about 300km away from Lijiang. It is a plateau lake with a total area of 52 square ...

Lugu Lake is an excellent reservoir for the pumped storage power station bestowed on us by God! Seven pumped storage power stations can be built on its west bank and north bank, with ...

The Crescent Dunes Solar Energy Project is a solar thermal power project with an installed capacity of 110 megawatt (MW) and 1.1 gigawatt-hours of energy storage located near Tonopah, about 190 ...

Lugu Lake is hemmed on both sides by steep mountains and partially forested slopes; it is fed by the Mosuo River and drained by the Gaizu River, which joins the Yalong River and eventually merges ...
