

What is a microgrid demonstration project?

The microgrid demonstration projects cooperatively built by Department of Defense, Department of Energy and the Department of Homeland Security are located at three U.S. military bases to continuously provide power supply to the critical load. The purpose is to create templates for military base applications.

What are the International microgrid standards?

Thus, many international microgrid standards are still being developed, several standards are on-going drafting by IEEE and IEC organization, such as self-regulation of dispatchable loads, monitoring and control systems, energy management systems and use case design.

Why do we need a standard system for microgrids and distributed energy resources?

The prosperity of microgrids and distributed energy resources (DER) promotes the standardization of multiple technologies. A sound and applicable standard system will facilitate the development of renewable energy and provide great guiding significance for technology globalization.

Should microgrid control standards be standardized?

Rapid microgrid development requires further progress in standards. Creating an adequate control standard is not possible until inverters are standardized. Those that test standards should prioritize simplicity and universal application over more advanced products for system requirements and testing.
