

News report on high generator wind temperature

Do wind turbine generators increase power ratings?

The main focus of wind energy related industries is to identify efficient yet reliable solutions to lower the cost of energy conversions . In recent years,the advancements and enhancements of wind turbine generators managed to increase the power ratings. However,there are a few points to look out for.

Why do wind turbines have a high inrush current?

Transients with extremely high inrush currents will be produced when the induction generators are connected to the power system,which results in disorders to the grid and torque spikes in the drivetrain of the turbines. Thus,the number of wind turbines are limited as the transient disturbs the grid .

Why do wind turbines have a high peak load?

These generators are usually employed in wind turbines with low ratio gearbox,or no gearbox in some cases. Therefore,the wind power fluctuations possess a tendency to lead to relatively heavier fluctuations in the torque. This,in turn,causes higher peak loads in the drivetrain.

Does wind speed affect a photovoltaic generator?

Here I show in the real-world operation of a larger scale photovoltaic generator that increases in wind speed can lead to small but notable energy losses,reflected in the mismatch losses directly derived from the operating voltage of each module.
