

Photovoltaic solar panels should be replaced every few years

How often should solar panels be replaced?

One way to keep your solar system operating at its peak is to sync up your roof maintenance with solar panel maintenance and replacement. Depending on roof shingle types, a typical roof needs to be replaced about every 25 years, which is the perfect time to potentially replace your solar panels.

Do solar panels need to be replaced?

Most solar systems are expected to last for decades, yet there are certain indications that removal or replacement is needed. The solar panels, as they near the end of their life, may not be as effective as they were when you first got them, and that could affect your energy cost savings as well.

How long do solar panels last?

Solar panels last for at least 25 to 30 years and begin declining in performance over that time by anywhere from 0.5% to 0.8% per year. This means that while you'll still have your system up and running after 30 years, it won't be operating at its best possible production, instead producing around 85-87% of its initial output. (Tongwei Co., LTD)

Do solar panels degrade over time?

It's true that your solar panels will degrade over time, but with proper maintenance and regular solar inspections, you can slow down the degradation of your panels so that they're working as much as possible and for as long as possible. Many factors may affect the lifespan of your solar panels and their energy output and efficiency.

Solar energy has become one of the leading alternatives to generate clean electricity and reduce dependence on fossil fuels. More and more households, businesses, and governments are ...
