

I have a Solis S5 hybrid inverter and 2 x 5kw pure drive batteries installed. I noticed this morning that I was exporting quite a lot back to the grid which was odd as I knew the batteries didn't ...

Had an issue with a Puredrive battery under warranty and used their customer service line. Katie was very efficient in our call and the outcome was an engineer visit to replace the battery the follow... See ...

The vendor's preferred battery is PureDrive which I haven't read up on. They've offered an AC coupled version, whatever that means - does it let me charge the battery from panels and export ...

I recently had a problem with a Grid Over Voltage Alert causing my Inverter to shut down. I contacted Duracell to ask for help and they remotely changed some settings and resolved the issue.

We are into our first winter of solar using a solis hybrid inverter and see that the cloudy winter days with lack of good light only charge the two Puredrive 5kw batteries up by a few %.

I had a problem recently with the batteries not charging. Puredrive came out and swapped a comms cable as apparently one of the batteries wasn't communicating with the inverter.

Generally the EV will see a start of a charge but won't see the end of a charge when we end it on the App or if it ends when a limit is reached. So the charge history is missing and car still ...

Hi all, I have had 5kw solar, panels, solis inverter, and 2x5kw puredrive batteries for a year now and all was well. However, recently, my puredrive batteries stop charging at 70%. ...

we had solar panels, an inverter and pure drive battery fitted. So far we have used a fraction of electricity produced. The battery does not charge or discharge.

I have recently had a 4.8kw solar system, with 5kw Puredrive battery storage, installed at my property by a professional company (promoted by the Scottish Government).
