

What is rooftop solar power?

Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power for your home or business.

What is a solar green roof mounting system?

The magic of this system really comes down to the base of the Solar Green Roof mounting system, as it simultaneously performs two key functions. Firstly, it serves as the green roof system's drainage board, storing a fixed amount of water for the plants above and carrying away the excess.

What is the best roof for solar?

The ideal roof for solar has these characteristics: Flat roofs offer flexibility to orient panels optimally using tilted mounting systems, though this reduces the number of panels that can be installed due to spacing requirements to prevent shading. Even partial shading can significantly impact solar production.
