

The project, which aims to reduce the schools' energy consumption in the long term, focuses on intensive educational support, child participation, and monthly energy monitoring.

The space within the upper secondary school will be restructured and enhanced, and the building will undergo an energy upgrade. The chemistry classrooms and preparation rooms will also be brought ...

In the project, the I&#214;W conducts research and interviews to determine the obstacles and success factors for the use of heat storage systems. Based on these results and several workshops with key ...

This study proposes an optimization strategy for school-centered energy systems, integrating battery storage and surplus energy management to maximize emergency power provision ...

Wir wollen unsere Schule energieeffizient machen und einen messbaren Beitrag zum Klimaschutz leisten. Dabei wollen wir als Sch&#252;lerinnen und Sch&#252;ler mehr &#252;ber Energieverbrauch, Energietechnik ...

There are already around 1.8 million solar energy storage units in German households. However, they are far from reaching their full potential. The Berlin University of Applied Sciences ...

Designed to stabilize grids and maximize clean energy use, these systems address critical challenges like solar intermittency and peak demand. This article explores how this technology works, its real ...

Cities and schools of the future will be smart, digital and sustainable. With their Smart School pilot project, InfraLab Berlin and the Berlin Energy Agency developed a concept for a learning site that ...

In the Smart Grid Laboratory at TU Berlin, electricity, heating and cooling grids, including generators, storage systems and consumers, can be simulated in their interaction.

Berlin has limited space for above-ground heat storage systems, which can also encounter hurdles in terms of building law and urban planning. Underground solutions such as aquifer heat storage are a ...
