

Sinopec Will it engage in solar power generation

BEIJING: Chinese refining giant Sinopec plans to build 10,000 solar power stations at its oil and gas operations and other sites by 2027, it said on Friday. Sinopec did not disclose the size of ...

Sinopec, one of China's largest energy and chemical companies, is making significant strides in its clean energy transition. Beyond its traditional operations, Sinopec is actively exploring and deploying ...

Sinopec has launched China's first commercial floating offshore photovoltaic project in a full-seawater environment, a 7.5-megawatt facility off Qingdao, marking a significant advance in...

Sinopec, China's state-owned oil giant, has embarked on an ambitious venture to expand its floating solar project with a focus on cost-efficiency and green hydrogen production.

Scheduled for launch in July 2025, Sinopec's 7.5 MW pilot project in Qingdao's coastal waters is China's first commercial-scale floating offshore PV system.

China Petroleum & Chemical Corporation (Sinopec), in collaboration with the Shandong Provincial Government and Qingdao Municipality, has officially commenced operations of the world's first ...

Last December China's state-owned oil company, Sinopec, recapped the results of a modestly scaled floating solar pilot project, aimed at producing green hydrogen from seawater.

The official operation of the plant, which harnesses solar energy to generate green hydrogen, marks a major stride forward in Sinopec's technological exploration to produce clean hydrogen as it ...

Built in a seawater environment, the project represents a significant breakthrough in floating solar technology for coastal and shallow-sea regions. Combined with a previously launched pile ...

In the field of green hydrogen refining, Sinopec has been vigorously advancing centralized wind power and photovoltaic development, laying out mega-scale projects integrating renewable energy power ...

Sinopec Will it engage in solar power generation
