

This guide helps troubleshoot a "Grid Over Frequency" error on an Autarco inverter. This error indicates that the frequency of the electricity grid exceeds the acceptable range for the inverter to operate safely.

Error 47 is caused by the inverter detecting an unusual frequency shift in the Grid. Are you saying the 8K is feeding the Grid input of the 12Ks? From the original post, it looks like Sol-Ark ...

This frequency shifting can take place repeatedly over the course of the day depending on load demands, solar potential and Powerwall state of charge and is perfectly normal and does not ...

The inverter has three under-frequency (UF) and three over-frequency (OF) trip points and times, as well as one under-frequency instantaneous trip point and one over-frequency instantaneous trip point.

1.If the alarm occurs occasionally, the power grid may be abnormal temporarily. The inverter automatically recovers after detecting that the power grid becomes normal.

If the alarm occurs frequently, check whether the power grid frequency is within the allowed range. If not, contact the local power operator. If yes, modify the power grid overfrequency ...

Learn what an inverter grid fault means, common causes, risks to your solar inverter, and practical fixes to restore stable grid connection and prevent faults.

To change the default frequency at which an SMA inverter reduces power, see the two options below based on the firmware of the inverter.

Grid overvoltage and grid overfrequency errors are common issues encountered with PV inverters, including Solis & Solax inverters, especially during periods ...
