

Are you a CoServ Member with solar panels? This article will explain how your distributed generation bill is calculated.

Utilities may submit new rate structures for NEM after December 31, 2022. Buy-all, sell-all, fixed compensation rate (\$0.2925/kWh).

There are relatively few utility-scale plants that have reached their end-of-life and have been decommissioned. Without direct experience, it is difficult to assess a plant's net salvage value.

Harmonics and Voltage Sag Compensation of a Solar PV-Based Distributed generation (DG) can be represented as a small-scale power system that contains loads, energy sources, energy storage ...

Using the value stack to determine compensation for community solar subscribers is a quite literal reflection of the injection of new values into major electricity regulation policy. The value ...

- This is a technology that compensates for the loss of photovoltaic power generation caused by shadows, snow, contamination, etc., and it can increase power generation efficiency by at least 10 to ...

Alliant spokesperson Tony Palese said this means customers could be paid anywhere from 7.9 to 13.5 cents per kilowatt-hour for their energy, depending on when it is sent to the grid. ...

As solar panels increasingly dot urban rooftops worldwide, property owners face new questions about photovoltaic system valuation during demolition. The compensation framework typically includes two ...

BOISE, Idaho -- Nearly 14,000 Idaho Power customers with rooftop solar panels will receive about 30% less compensation for excess energy they send back to the electrical grid, ...

approximately 12 months. The Rancho Seco Solar II project, located in California, began decommissioning in 020. This project was among the earliest large-scale solar facilities to go through ...
