

In 2024, renewable power capacity expansion increased compared to 2023 and remained well above the long-term trend. As in previous years, most of this expansion occurred in China and, to a lesser ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Solar electricity is poised to dominate America's energy expansion in 2025, with developers planning to add 33 gigawatts (GW) of solar photovoltaic capacity - representing more ...

Solar and wind growth met all new power demand in 2025, pushing fossil generation to stall for the first time since the pandemic.

Electricity generation from solar continues to grow alongside capacity additions. For the rolling 12 months ending March 2025, solar facilities, including utility-scale and small-scale projects, ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

More than 500 GWdc of PV are expected to be installed in 2025. At the end of 2024, China and the U.S. had collectively installed more than 1 TWdc of PV. In 2024, wind and solar ...

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of ...

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW in the ...

SEIA's latest report highlights that 77% of all solar capacity installed in 2025 (year-to-date) has been in states won by President Trump, including 8 of the top 10 states for new installs.
