

Imagine a future where South Africa's cities hum with energy generated not from distant power plants, but from the rooftops above us. It's not a distant dream. The country is witnessing an ...

Solar Rooftops: South Africa's vast rooftops could power 6 million homes, reducing coal reliance and boosting renewable energy.

New Global Solar Council report shows solar deployment spreading across more African countries, increasingly driven by distributed systems and rising demand for reliability -- while ...

Installations of solar power in Africa jumped 54% in 2025, new data shows, marking the fastest annual growth on record, driven by governments and development agencies deploying utility ...

Africa's solar energy market continues to grow significantly. In 2025, the continent added more than 5,000 MW solar power capacity. In this article, we breakdown countries leading this drive.

Ghana's ambition to accelerate its growth in renewable energy received a significant boost with the inauguration of a 16.82-megawatt rooftop solar power plant in Tema. Owned by LMI ...

SA's rooftops could generate 12 GW solar power, boosting energy security through regulation and virtual power plants.

Africa records its fastest solar growth in 2025, with installations surging 54% YoY to 4.5 GW, driven by utility-scale and distributed solar expansion, says Global Solar Council.

South Africa's big companies, hospitals and universities have millions of square metres of rooftop space that is suitable for generating solar power.

Below are the top five biggest rooftop solar installations in South Africa by peak production capacity in October 2025.
