

What are the different types of third-party ownership models in solar energy?

There are several different types of third-party ownership models in solar energy, including power purchase agreements (PPAs) and solar leases. In a PPA, the consumer agrees to purchase the electricity generated by the solar panels at a fixed rate for a set period of time, typically 10-20 years.

What is third-party solar financing?

Third-party financing is a well-established financing solution in the United States, having emerged in the solar industry as one of the most popular methods of solar financing. Third-party solar financing predominantly occurs in two forms: solar leases and power purchase agreements (PPAs).

What is a PPA solar project?

In the PPA model, the solar energy system offsets the customer's electric utility bill, and the developer sells the power generated to the customer at a fixed rate, typically lower than the local utility. Below are resources to help you understand third-party ownership financing structures as a means to facilitate your solar project development.

Which states authorize third-party PPAs for solar PV?

This map of the United States shows which states and territories authorize the third-party PPAs for solar PV, which includes at least 28 states (plus Washington, D.C., and Puerto Rico). This map and information are provided as a public service and do not constitute legal advice.

This innovative approach is revolutionizing how people access solar technology, specifically rooftop photovoltaic (PV) systems. TPO encompasses arrangements like solar leases and power purchase ...

What Does "TPO Solar" Mean? TPO, or Third-Party Ownership, is a solar financing model in which a third-party provider owns, is responsible for the solar installation, and handles ongoing ...

In the PPA model, the solar energy system offsets the customer's electric utility bill, and the developer sells the power generated to the customer at a fixed rate, typically lower than the local ...

Third-Party Ownership (TPO) is one of the fastest-growing ways for homeowners to adopt solar power. With electricity rates climbing, concerns about climate change growing, and more ...

The third-party ownership (TPO) model for solar photovoltaic (PV) systems has emerged as a pivotal solution to overcome financial and structural barriers to solar adoption, particularly in low ...

Third-party ownership (TPO) in solar energy refers to a financing arrangement where a third party, typically a solar company or investor, owns and operates a solar energy system on a ...

TPO (Third-Party Ownership) systems are solar energy solutions where a company owns and maintains the solar system as opposed to a homeowner. There are typically two types of ...

Learn how TPO solar works in 2026. Compare leases vs PPAs, see which states allow third-party ownership, and discover why TPO is now the path to federal incentives.

National Renewable Energy Laboratory report - Solar PV Project Financing: Regulatory and Legislative Challenges for Third-Party PPA System Owners Forbes article on third party ownership. Tioga ...

Third-party financing of solar energy primarily occurs through two models: power purchase agreements (PPAs) and solar leases. In both models, a solar company installs a solar system on the customer's ...
