Doorless designs
Abolition of lockers
There are a number of features or characteristics which may vary in lockers. Because purchasers will need to specify what they want in each of these when ordering, it is more common to order a particular configuration rather than buy "off the shelf" in a shop, although certain very common configurations can be found in shops fairly easily. These features include:

A rotation locker is a mechanically advanced combination lock that uses alternating clockwise and counter-clockwise dial movements to align internal rotating discs, offering greater accuracy, ...

A locker nest refers to multiple lockers grouped together in a single unit. Instead of purchasing individual lockers, businesses often buy nested lockers, which are joined during ...

This rotation moves a bolt or latch that either secures the locker door (locking) or releases it (unlocking). In simpler terms, turning the key turns a part inside the lock, and that part either allows ...

Key locking options include flush locks, cam locks, or locks incorporated into a rotating handle; padlocking facilities may be a simple hasp and staple, or else a padlocking hole may be included in a ...
