

# Where should the solar generator be placed

Where should a generator be placed?

A generator should be placed in your yard in a location where it is at least 20 feet away from the house and other buildings, dry, and in the open air. Mats is the founder and head editor of Generator Decision.

Where should a generator be stored?

Carbon monoxide poisoning is especially dangerous since this gas is odorless and colorless. For this reason, you want to put your generator outside. And not only outside, but also far enough away from the house, downwind, away from windows and doors, and in a dry space. Keep these dangers in mind when figuring out where to store a generator too.

How to place a generator correctly?

Below you will find proven guidelines for placing your unit correctly. Whatever kind of generator you are placing, be it a portable job site model or a standby version that can power your whole house in the event of the grid going down, you need to put it on a level spot. Level ground is best for ensuring optimum function.

Can you use a generator outside?

Using one indoors, even in a garage, can cause deadly carbon monoxide buildup. Outdoor placement allows for proper ventilation and safer operation during power outages. In this article, we'll explain the dangers of indoor use, how to safely position your generator outside, and what setups work best for homes, RVs, and job sites.

Generators should always be placed outdoors instead of indoors for most of the time, at least 20 feet away from doors, windows, or vents. Using one indoors, even in a garage, can cause ...
